

The Moa Point animal shelter replaced their old wooden kennels with our striking yellow and black FRP guarding mesh.

The new cages will be an improvement for both the staff and the animals at the shelter, says Team Leader Animal Services, Damian Nunns.

“The new cages are much easier to clean for the staff. They are also much warmer and more comfortable for the dogs.”

Our guarding mesh was the ideal replacement. It is durable, hard-wearing, easy to clean, and does not deteriorate from moisture with kennels frequently washed down. It is also lightweight and easy to assemble. It is visually appealing, with no sharp edges, and can be customised on-site to suit the application.

“

The new cages are much easier to clean for the staff. They are also much warmer and more comfortable for the dogs.

We put our FRP Guarding to the Test

Chemically Inactive

Highly resistant to corrosion and won't leach into the environment.

UV Tested

UV tested to ensure the mechanical properties are not subject to degradation.

Low Maintenance

Does not require surface protection.

In-House Design Service

FRP offers a full in-house design service to help you work out what's required to transform your current space into a modern, smart-looking and functional kennel environment.

Talk to us today about your requirements, and we can indicate the time and cost required to create design drawings and provide a quote for the materials to bring your project to fruition.
