

Our FRP grating, anti-slip products, and modular handrail and guarding systems are ideal for many industrial applications, including hazardous environments. They are durable, easy to install, low maintenance, and highly resistant to slips, fire, and corrosion. Without the lead times typical with steel fabrication, our handrails and guarding eliminate the need for on-site formalities like hot work permits.

“The use of FRP materials was a key element to reduce fabrication/installation time and overall contract costs. This project was fabricated by the FRP Ltd inhouse team and transported for quick assembly on site. ”

– Project Engineer

### Product Solutions

Install an assembly made from lightweight, modular FRP materials to reduce overall fabrication and installation costs. Our Regular Mesh Grating is popular for various walkways and catwalks, with our Mini Mesh especially useful for overhead platforms. Our UV tested Modular Guarding System is ideal for perimeter fencing, pedestrian barriers, and machine guarding.
