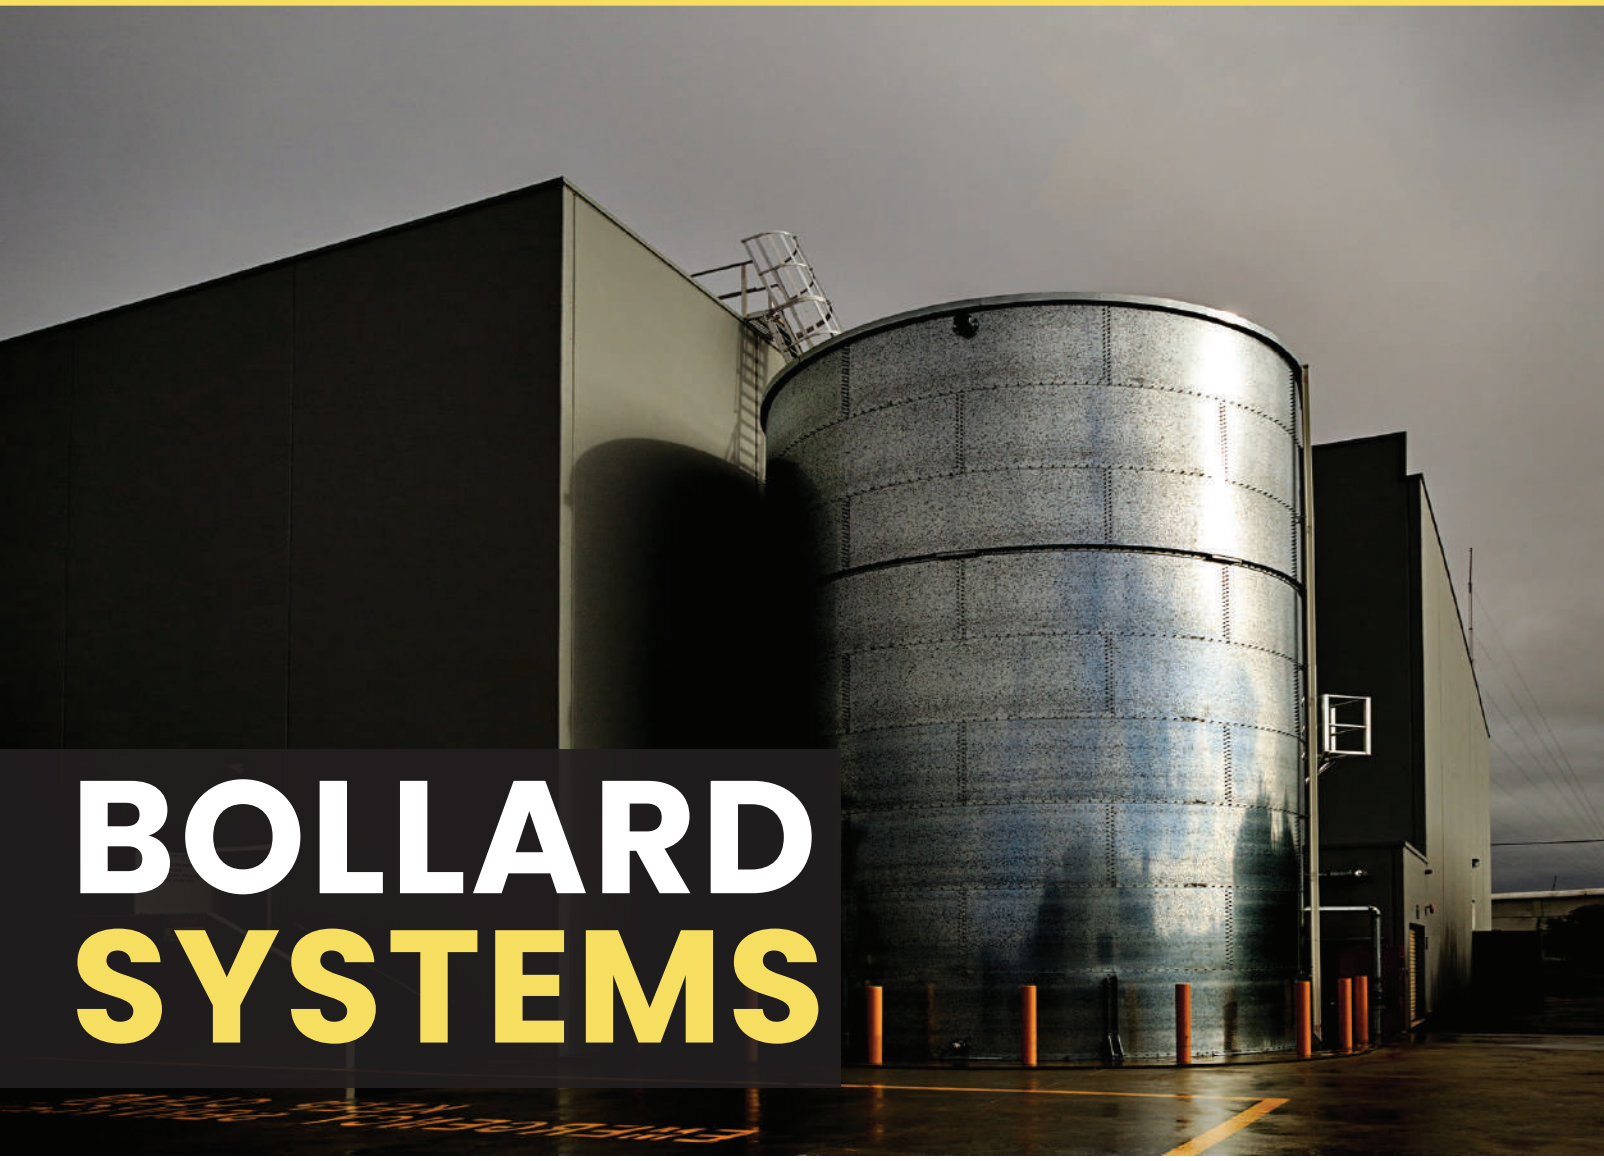
FRP LTD

Your New Zealand-owned source for FRP, steel, and safety solutions — for over 10 years



BOLLARD SYSTEMS

Keep people, assets, and traffic moving with high visibility, low maintenance, and protection from our Impact Barrier Systems.

0800 464 377 sales@frp.co.nz frp.co.nz 77 Truman Lane, Mt. Maunganui 3175

BOLLARD SYSTEMS

Our Bollard Systems offer versatile, high-strength protection for entrances, walkways, machinery, and infrastructure. Designed to absorb and deflect impacts, these bollards help control traffic, safeguard assets, and provide visual guidance in both indoor and outdoor environments.

BENEFITS **AND APPLICATIONS**

Impact Resistance & Versatile Use

Engineered to absorb high-energy collisions from vehicles. Suitable for traffic control, asset protection, and pedestrian safety in a range of environments.

Corrosion-Resistant & Low Maintenance

UV-stabilised polymer shell and coated steel core for long-lasting performance. No repainting or rust prevention required.

High Visibility

A bright finish improves driver and pedestrian awareness, reducing risk in high-traffic and low-light conditions.

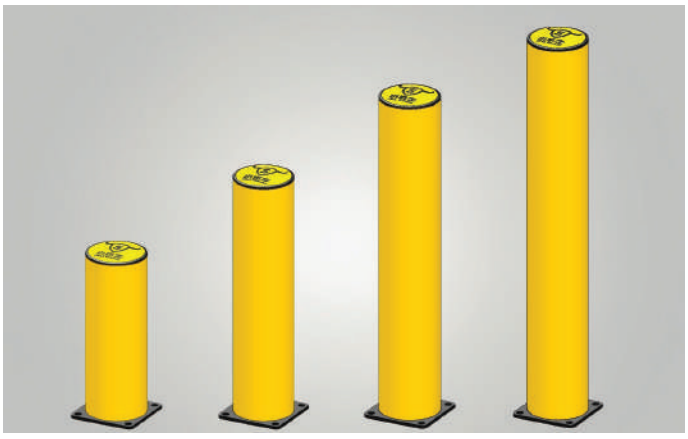
Quick Installation

Simple anchoring system for fast placement. Lightweight components reduce labour time on site.

WHERE THEY'RE USED

Warehouses & DCs	Rack ends, pedestrian corridors	**Car Parks**	Entrance control
Loading Docks	Dock edges, reversing guides	**Industrial Facilities**	Machinery Perimeters
Commercial Entrances	Storefronts, drive-throughs	**Councils & Public**	Footpaths, parks

BOLLARD SPECIFICATIONS



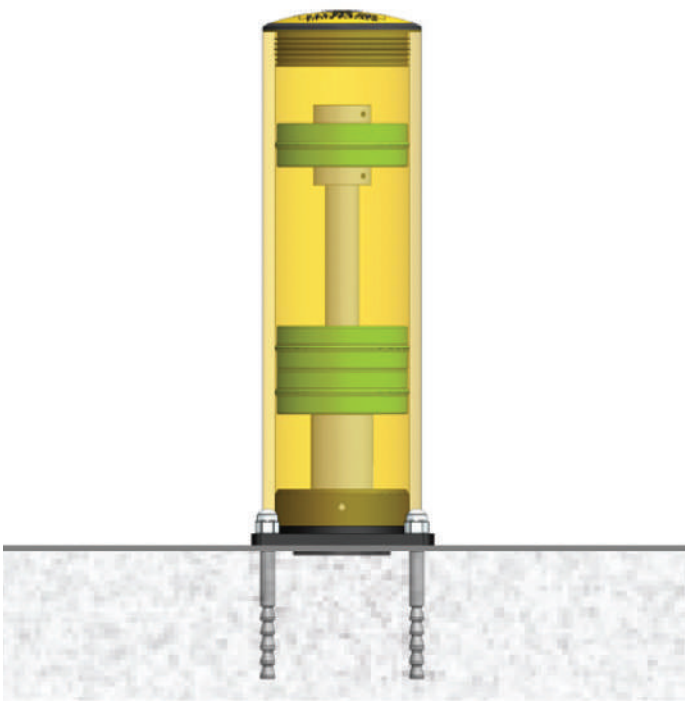
Model	Available Heights (mm)
125 mm	500 750 1000
160 mm	500 750 1000 1200
180 mm	500 750 1000 1200 1500

CONSTRUCTION **AND MATERIALS**

Outer Shell
UV-stabilised polymer with high visibility, safety yellow pigmentation. Resistant to chemicals, weathering, and impact deformation. No repainting required.

Core
Steel with powder-coated finish for maximum structural strength. Engineered to absorb high-energy vehicle collisions and resist permanent deformation.

Anchoring System
Dacromet-coated chemical anchors with stainless steel cap nuts. High-strength and corrosion resistance with straightforward maintenance access.



PAS 13 & TÜV Nord — Built to a Recognised Standard

PAS 13 is the British Standards Institution code of practice for workplace traffic safety barriers, setting defined requirements for design, installation, and impact testing. TÜV Nord is an independent, globally recognised certification body — their verification means a neutral third party has confirmed the stated performance against those requirements. Together, these credentials give you documented assurance that our bollards are built and proven to perform in real-world conditions.
